Keysight Technologies
FieldFox Vector Network Analyzers
9/14/18/26.5 GHz

Technical Overview
Every piece of gear in your field kit had to prove its worth. Measuring up and earning a spot is the driving idea behind Keysight Technologies, Inc. FieldFox microwave analyzers. They’re equipped to handle routine maintenance, in-depth troubleshooting and anything in between. Better yet, FieldFox delivers Keysight-quality microwave measurements—wherever you need to go.

On land, sea and air, FieldFox is ready for a wide range of applications: satellite communications, microwave backhaul, military communications, radar systems, and more. In harsh conditions and hard-to-reach locations, FieldFox delivers precise results that are consistent with those you’d see on a benchtop analyzer. To get you out of the elements sooner, the task-driven user interface will help you finish the job faster.

FieldFox vector network analyzers give you—and your budget—more flexibility: configure an instrument with transmission/reflection today and add full 2-port S-parameters and other capabilities in the future.

### Key Measurements

**Vector network analyzer (VNA)**
- All four S-parameters, magnitude and phase
- Guided Calibration Wizard, full 2-port cal, TRL, waveguide calibration
- Best trace noise and superior dynamic range for handheld VNAs
- Flat output power across whole frequency span, in 1 dB steps
- 30 kHz to 26.5 GHz

**Cable and antenna analyzer**
- Distance-to-fault, return loss, and cable loss (1-port and 2-port)
- Integrated QuickCal—no calibration kit required
- Immediate cable and antenna and vector network analysis at the test port with CalReady
- 30 kHz to 26.5 GHz
Add the World’s Most Precise Handheld Microwave Analyzer to Your Kit

Built-in power meter
- Easy to view analog and digital display
- ± 0.5 dB accuracy
- 5 kHz to 26.5 GHz

Power meter using a USB power sensor
- Measure peak power and average power
- -60 to +44 dBm (sensor dependent)
- 9 kHz to 40 GHz (frequency range sensor dependent)

Pulse measurements using a USB peak power sensor
- Measure peak power, average power and peak to average ratio
- Pulse profile characterization with gating
- 50 MHz to 40 GHz (frequency range sensor dependent)

Vector voltmeter
- Cable trimming, phase shift and electrical length measurements
- A/B and B/A ratio measurements
- 30 kHz to 26.5 GHz
Carry FieldFox wherever you need to go

- Kit friendly 3.0 kg or 6.6 lbs
- Large buttons are easy to operate, even when wearing gloves
- Field swappable battery lasts up to 3½ hours
- Non-slip rubber grip securely fits in your hands and won’t slide off the hood of your vehicle
- Vertical “portrait” orientation makes it easy to hold and operate at the same time

Field-proof usability for better answers in less time

- Bright, low-reflection display and backlit keys enable easy viewing in direct sunlight or darkness
- Intuitive user interface is designed for your workflow, enabling measurements in fewer key presses
- One-button measurements simplify complex setups and ensure quick, accurate results with confidence
- Calibration Wizard guides user to ensure simple and accurate calibrations
- 3-year warranty ensures field confidence—especially in harsh environments
Rugged Enough to Meet MIL-Specs

- Completely sealed instrument enclosure provides measurement stability in harsh environments
- Specially designed connector bay protects RF connectors from damage due to drops or other external impacts (designed to withstand 4’ drop on concrete surface on all 6 faces)
- Water-resistant chassis, keypad and case withstand wide temperature ranges and salty, humid environments
  - Case withstands shock and vibration
  - Wide operating temperature
    -10 to +55 °C (14 to 131 °F)
  - Wide storage temperature
    -51 to +71 °C (–60 to 160 °F)
- Meets MIL-PRF-28800F Class 2 requirements
- Type tested and meets MIL-STD-810G, Method 511.5, Procedure I requirements for operation in explosive environments
- Meets IEC/EN 60529 IP53 requirements for protection from dust and water
Pick up FieldFox for its Ergonomics

Convenient side strap makes it easy to hold and carry.

Anti-glare 6.5 inch LCD display with LED backlight.

Portrait design and large buttons for easy operation—even with gloves on.

Task-driven keys are grouped to easily perform field measurements.

Dedicated marker keys for quick marker function access.

Backlit keypad.

11.5” (292 mm)

7.4” (188 mm)
... and Depend on its Durability and Convenience

**TOP**

- Port 1
- Quick connect shoulder strap clips
- Get precise location using the built-in GPS receiver
- External reference and external trigger input
- Connector bay protects RF connectors

**RIGHT SIDE**

- LAN port for data transfer and SCPI programming
- SD flash card for data storage
- USB ports for easy data storage
- External reference and external trigger output
- Gasketed doors protect ports from moisture
- Keep going with field-swappable batteries that last up to 3 1/2 hours

**LEFT SIDE**

- Built-in DC supply for powering external bias-tees, probes, and active devices
- External reference and external trigger input
- Connector bay protects RF connectors
Vector network analyzer

A standard FieldFox vector network analyzer provides vector transmission and reflection measurements (T/R), or S11 and S21, with magnitude and phase. Adding Option 211 (full 2-port S-parameters) brings new levels of accuracy and convenience for testing microwave components.

With a full 2-port network analyzer, you can measure the forward and reverse characteristics of your component without having to disconnect, turn around, and reconnect it to the analyzer. The full 2-port calibration gives you the best measurement accuracy possible.

FieldFox’s four independent, sensitive receivers provide 94 dB of dynamic range for measurement of high rejection, narrowband devices such as cavity filters. The receivers also enable full 2-port error correction with the unknown thru method, allowing users to measure non-insertable devices accurately and easily.

FieldFox’s calibration engine is the same engine that powers the well-respected Keysight ENA and PNA network analyzers. FieldFox leverages Keysight microwave expertise to deliver consistent measurements with Keysight benchtop VNAs.

Calibrations

FieldFox’s guided Cal Wizard takes guessing out of calibration and allows you to easily perform the following calibrations:

– Full 2-port
– OSL, response, enhanced response
– TRL, LRL, offset short

Simultaneously measure and view all four S-parameters, with a single connection

FieldFox microwave vector network analyzer architecture
Network analyzer time domain

With the time domain option, FieldFox computes the inverse Fourier transform of the frequency-domain data to display reflection or transmission coefficients versus time. Time domain gating can be used to remove unwanted responses such as connector mismatch or cable discontinuities, and the results can be displayed in either time or frequency domain.

Waveguide support

Waveguides are widely used to provide transmission links between microwave transmitters and antennas, as waveguides have less loss than coax. Keysight offers both high-performance and also economical waveguide calibration kits. The economical kits are ideal for field maintenance and troubleshooting, as they provide good measurement results at lower costs.

Vector voltmeter

Using FieldFox’s vector voltmeter (VVM), the phase shift and electrical length of a device can be measured. You can view results on the large display as far as ten feet or three meters away. VVM also provides ratio measurements of magnitude and phase of two channels, A/B or B/A. You can use this capability to verify the magnitude and phase differences between multiple signal paths such as in an antenna or phased array.

FieldFox offers all the key functionalities of the HP 8508A, in a handheld form factor, and without the need for the source/bridge/accessories required with HP 8508A.

Time domain measurements provide insight into the device under test

Vector voltmeter used for cable trimming
Cable and antenna analyzer

Fifty to sixty percent of microwave-link equipment issues are related to cables, antennas and connectors. Degraded feeder lines cause poor coverage, link failures, and reduced sensitivity on the receive path. To maintain the quality of a microwave link, it is critical to keep the cable and antenna systems in good working condition.

Use FieldFox to make return loss, VSWR, insertion loss, 1-port cable loss, and distance-to-fault measurements. You can test antennas, cables, filters, and amplifiers with a single instrument. The amplifiers can be biased using FieldFox’s built-in DC source.

Return loss and distance-to-fault (DTF) measurements

Measuring and viewing return loss and distance-to-fault simultaneously allows you to fix and tune systems much faster. Optionally, you can utilize QuickCal or CalReady to ensure the instrument is always calibrated and ready to make consistent and worry-free measurements.

The built-in cable editor allows you to edit existing cable types on-site, save them as new cable types with user defined names, and share the cable files with your team.
CalReady-calibrated at power on and ready to go

Save time and get right to work with FieldFox’s CalReady feature. With CalReady, the analyzer is ready for measurements, immediately following power on or preset. FieldFox is ready to make measurements such as S11, 1-port cable loss, and DTF without having to connect/disconnect additional calibration devices.

Hassle-free calibration in the field with the industry’s first and only QuickCal

FieldFox is the industry’s first and only handheld VNA with a built-in calibration capability that allows you to calibrate the network analyzer without carrying a calibration kit (cal kit) into the field.

With any other test instrument, when you add additional devices to the test port, such as jumper cables or adapters, you need to recalibrate using a cal kit. QuickCal eliminates the need to carry and use a cal kit, and also provides worry-free accuracy.

FieldFox’s QuickCal supports measurements such as insertion loss/gain, 1-port cable loss, return loss, and DTF.

Broadband calibration

FieldFox allows you to make broadband calibrations, which means the instrument is calibrated over the maximum frequency range. After a broadband calibration, you can change the frequency range or number of points without recalibrating the instrument. The calibration is interpolated, and accuracy is maintained.

User cal kit support

For users who wish to use traditional mechanical calibration kits, FieldFox supports most HP/Keysight cal kits, and also allows you to define your own custom calibration kits.

Fast and accurate calibration with ECal

The FieldFox calibration engine supports Keysight’s USB ECal modules. ECal support reduces calibration time and the need to make multiple connections during testing, while also providing for greater consistency between measurements. For FieldFox users, that translates into fewer human errors and increased accuracy.
Built-in power meter
By leveraging InstAlign technology, FieldFox is able to make very accurate channel power measurements. The channel bandwidth can be set wide to simulate average power meter measurements. This measurement function provides the flexibility to make user definable channel power measurements with accuracy up to ± 0.5 dB.

USB power sensor support
FieldFox can connect with the Keysight USB power sensors to make microwave power measurements up to 40 GHz. Using USB peak power sensors, users can measure both the average and the peak power of a modulated signal.

Pulse measurements
FieldFox’s pulse measurement option allows users to efficiently characterize pulsed-RF signals such as those used in radar and electronic warfare systems, leveraging the Keysight USB peak power sensors (available in 18 and 40 GHz models). Measurements include peak power, peak to average ratio, and pulse profile parameters such as rise time, fall time and pulse repetition frequency.

Built-in GPS
A built-in GPS receiver provides geo-location tags to measurements. The geo data—time, latitude, longitude, and elevation—can be displayed and saved in data files. In addition to location information, the GPS provides an accurate frequency reference to improve accuracy.

Built-in variable voltage DC bias
FieldFox has a built-in variable voltage DC bias source. The source provides 1 to 32 VDC with maximum current of 650 mA and 8 W maximum power.

The DC bias source can provide DC power to amplifiers under test and bias tower mounted amplifiers (TMA) when engineers need to sweep through the TMA to reach the antenna (bias-tees available separately).
Remote control capability with iPad or iPhone

Engineers and technicians can now remotely monitor and control their FieldFox using their iOS device such as an iPhone, iPad, or iPod Touch. FieldFox’s Remote Viewer iOS app emulates the front panel of the unit, so users can simply press any FieldFox key right from their iOS device.

The app also allows users to instantly access technical documents such as data sheets.

FieldFox’s Data Link software makes report generation and documentation easier

FieldFox’s complimentary Data Link software provides data transfer, data definition and report generation. Markers and limit lines can be added to the traces. Cable files and antenna factors can also be loaded using Data Link.

Remote control via LAN and FieldFox programming

FieldFox analyzers are fully SCPI compliant and can be controlled over the LAN.
Specifications in Brief

See the FieldFox Handheld Analyzer Data Sheet for a complete listing of the specifications:

Vector network analyzer and cable and antenna analyzer

The performance listed in this section applies to the cable and antenna analyzer (referred to as CAT) and vector network analyzer (VNA) capabilities available in the following models (may require options—see configuration guide):
FieldFox microwave combination analyzers: N9913A, N9914A, N9915A, N9916A, N9917A, N9918A
FieldFox microwave vector network analyzers: N9925A, N9926A, N9927A, N9928A

N9910X-821 Telescopic whip antenna
Carry precision with you.

Every piece of gear in your field kit had to prove its worth. Measuring up and earning a spot is the driving idea behind Keysight’s FieldFox analyzers. They’re equipped to handle routine maintenance, in-depth troubleshooting and anything in between. Better yet, FieldFox delivers Keysight-quality microwave measurements—wherever you need to go. Add FieldFox to your kit and carry precision with you.
