Agilent V/W281C,D
mm-Wave-to-Coax Adapters
50 to 110 GHz
Product Overview

- Excellent repeatability
- Measurement versatility
- WR-15, WR-10 (V, W band waveguide)
- Precision 1-mm coax connectors

Increased measurement versatility
Coax measurements to 110 GHz. The Agilent Technologies V/W281C,D precision 1 millimeter waveguide-to-coax adapters offer a simple, low SWR transition between transmission media. Take advantage of stable, low loss, and low SWR waveguide when measuring coaxial devices at higher frequencies. Or keep the convenience of coax, even when testing waveguide components. V/W281 adapters increase the versatility of test systems, like the Agilent 8510XF, to measure both coax and waveguide components.

Excellent accuracy
Low SWR transitions reduce mismatch uncertainty and excellent repeatability ensures consistent measurements. Available with both male and female connectors, these adapters help microwave engineers combine the best test components from each transmission media. With the V/W281 adapters, engineers can balance the merits of coax and waveguide to achieve the best combination of accuracy, cost, and ease-of-use.

1. Length from mating surface of 1-mm connector to center line of waveguide aperture.
Specifications

Specifications describe the instrument’s warranted performance over the temperature range 0 to 55 °C (except where noted). Supplemental characteristics are intended to provide information useful in applying the instrument by giving typical but nonwarranted performance parameters. These are denoted as “typical,” “nominal,” or “approximate.”

1. f = jack, m = plug
3. At the coaxial port only.
4. Repeatability = 20 log \(|\Delta G|\) where \(|\Delta G| = |G_{m1} - G_{m2}|\). This is the difference between two measurements \(G_{m1}\) and \(G_{m2}\) before and after one disconnect/connect cycle at the coax port. Repeatability depends upon proper torque and pin depth.
