Agilent Technologies 8960 Series 10 Wireless Communications Test Set

Class Description
Agilent Technologies 8960 Series 10 Preventive Maintenance Training and Site Evaluation is an on-site delivered class to evaluate application conditions and provide training on maintenance techniques for maximizing test set up-time and productivity.

You Will Receive
Preventive Maintenance Training and Site Evaluation is 2 to 3 days of class covering user applications, calibrations, adjustments, and hardware maintenance.

The class covers:
- Troubleshooting an 8960 Series 10 test set for proper functional performance
- Optimizing performance with user calibrations
- System installation qualification methods
- Test set hardware cleaning and maintaining
- Hands-on maintenance training on a sample of customer test sets as time allows.

The course does not include:
- Full calibration training

Class Requirements
Customer Prerequisites
Customer must provide suitable classroom to accommodate the desired number of students and at least one bench with adequate power for test demonstrations. Students are not required to have a technical background but it is recommended.

Service Delivery Method
A two person Agilent Technologies team will travel to the customer site for this service. The team is composed of experienced 8960 Series 10 test set technical staff members. The training is delivered using the customer’s 8960 Series 10 test sets with Agilent test equipment. Maintenance procedures will be performed on as many customer units as time allows during the class delivery.

Equipment
The Agilent Technologies team will provide the necessary tools and Agilent test equipment. The customer must provide adequate power and bench space for the class. Access to a sample of the customer’s 8960 Series 10 test sets is required.

Class Benefits
Products are Maximized for Production
The customer test sets and associated hardware can be maintained for maximum phone production. The test sets can be routinely tested for compliance to phone test standards. Defective products or materials can quickly be identified and removed for repair or service.
Products are Tested and Maintained with Agilent Factory Developed Techniques

Take advantage of Agilent Technologies’ experience and manufacturing knowledge to ensure that your test set is kept at peak productivity. Our training teams are experienced technical staff who know the product and are dedicated to your success.

Training is Scheduled According to Your Needs

In most cases, the training can be coordinated to fit your particular production requirements.
