## High transfer rate for demanding test applications

Keysight Technologies 82351A PCIe®-GPIB interface card is designed for integration into next generation PCs or workstations. It offers fast data transmission for various demanding test applications that require data to be transferred to memory fast enough without any lost or overwritten.

PCIe® (PCI Express®) is an evolution-ary version of PCI that offers a higher transfer rate across a low number of wires. It is also backward-compatible with PCI software, so you don't need to perform any code re-configuration. PCIe®'s powerful bus architecture allows bi-directional data transmission, and the implementation of a new class of test applications.
